

Consent

Thank you for your interest in participating in this study. The experiment will take **approximately 15 minutes** to be completed. All information collected during this study will be kept confidential. All data will be stored **anonymously and securely** and used only for research purposes.

You will be compensated for your participation in the study. You can only be compensated if you complete the entire questionnaire. You will receive a **flat participation payment of \$2.00** for completing the questionnaire as well as an **additional bonus payment that depends on your and another participant's decisions.**

If you have any questions or concerns about this study, please contact felix.boenisch@wzb.eu.

I have read and understand the above information. I voluntarily agree to participate in the study.

☐ Yes

Next

Your decisions

In this experiment you will make a sequence of predictions. In particular, you will have to **predict a person's weight** based just on a facial image. All people who's facial image will be shown to you have explicitly consented for their facial image to be used for this specific task.

Moreover, you will be **matched to a random other participant, your partner**, and the performance of your predictions will **determine the payoff of your partner in the experiment**.

You will be making **10** predictions. If a prediction is **within 10 pounds (lbs)** of the true answer, you will score a point.

If you manage to score **7 or more points** across all 10 predictions **your partner** will earn **\$5.00**.

If you score **less than 7 points** across all 10 predictions **your partner** will only earn **\$1.00**.

In each round you will be shown a facial image and you have to predict the weight of that person. You can either adjust a slider or enter a weight in lbs or kg below the slider. Try it out below, by setting the weight to 165 pounds.

0400

pounds (lbs)

kilograms (kg)

You will have **3 practice rounds** to familiarize yourself with the prediction task. After each practice round you will receive some feedback.

Practice Round 1

Please predict the weight of the person below.

0

400

0

pounds (lbs)

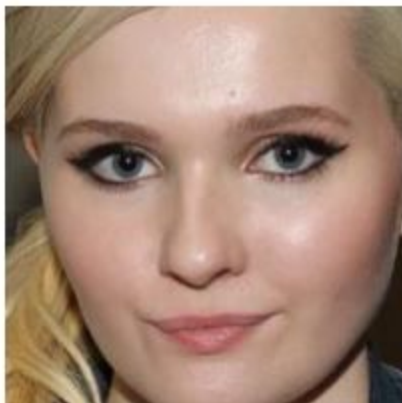

0

kilograms (kg)

Next

Practice Round 1

Feedback

Your prediction: 132 lbs

True bodyweight: 11 lbs

Your prediction was not within 10 pounds (lbs) and you did not earn a point.

Next

End of practice

The practice rounds are now concluded.

As a reminder, you will now make 10 predictions, which are **payoff-relevant to another, randomly selected participant, your partner**. Your partner did not perform the same task and **their payment is almost entirely dependent on your predictions**.

Again, For each prediction, if you get **within 10 pounds (lbs)** of the true answer, you will score a point. If you manage to score **7 or more points** across all 10 predictions **your partner** will earn **\$5.00**. If you score **less than 7** points across all 10 predictions **your partner** will earn **\$1.00**.

For completing all 10 predictions you will receive \$2.00 **independent of the achieved score**.

From now on, you will not receive feedback between rounds.

Example:

In order to test your understanding the table below provides a hypothetical example of 10 guesses and true bodyweights. How many points were scored in this example?

- ☐ 5
☐ 6
☐ 7

Your Hypothetical Guess (in lbs)	Hypothetical Truth (in lbs)
110	117
217	193
131	109
165	152
135	144
244	255
115	123
171	144
207	199
170	167

Which of the following statements is correct for the example above?

- ☐ I will receive **an additional payment of \$5.00** and my partner will receive **no additional payment**.
☐ I will receive **an additional payment of \$2.00** and my partner will receive **an additional payment of \$5.00**.
☐ I will receive **an additional payment of \$2.00** and my partner will receive **an additional payment of \$1.00**.
☐ I will receive **an additional payment of \$1.00** and my partner will receive **no additional payment**.

How well do you think you did?

In the table below, please indicate how likely you think it is that you scored 0, 1, 2, ..., 10 points. For each line, please adjust the slider to the probability that you think you scored that amount of points. Overall, all probabilities must add up to 100 percent.

Probability that you scored 0 points:	0		100	0%
Probability that you scored 1 points:	0		100	0%
Probability that you scored 2 points:	0		100	0%
Probability that you scored 3 points:	0		100	0%
Probability that you scored 4 points:	0		100	0%
Probability that you scored 5 points:	0		100	0%
Probability that you scored 6 points:	0		100	0%
Probability that you scored 7 points:	0		100	0%
Probability that you scored 8 points:	0		100	0%
Probability that you scored 9 points:	0		100	0%
Probability that you scored 10 points:	0		100	0%

Sum of probabilities: **0** %

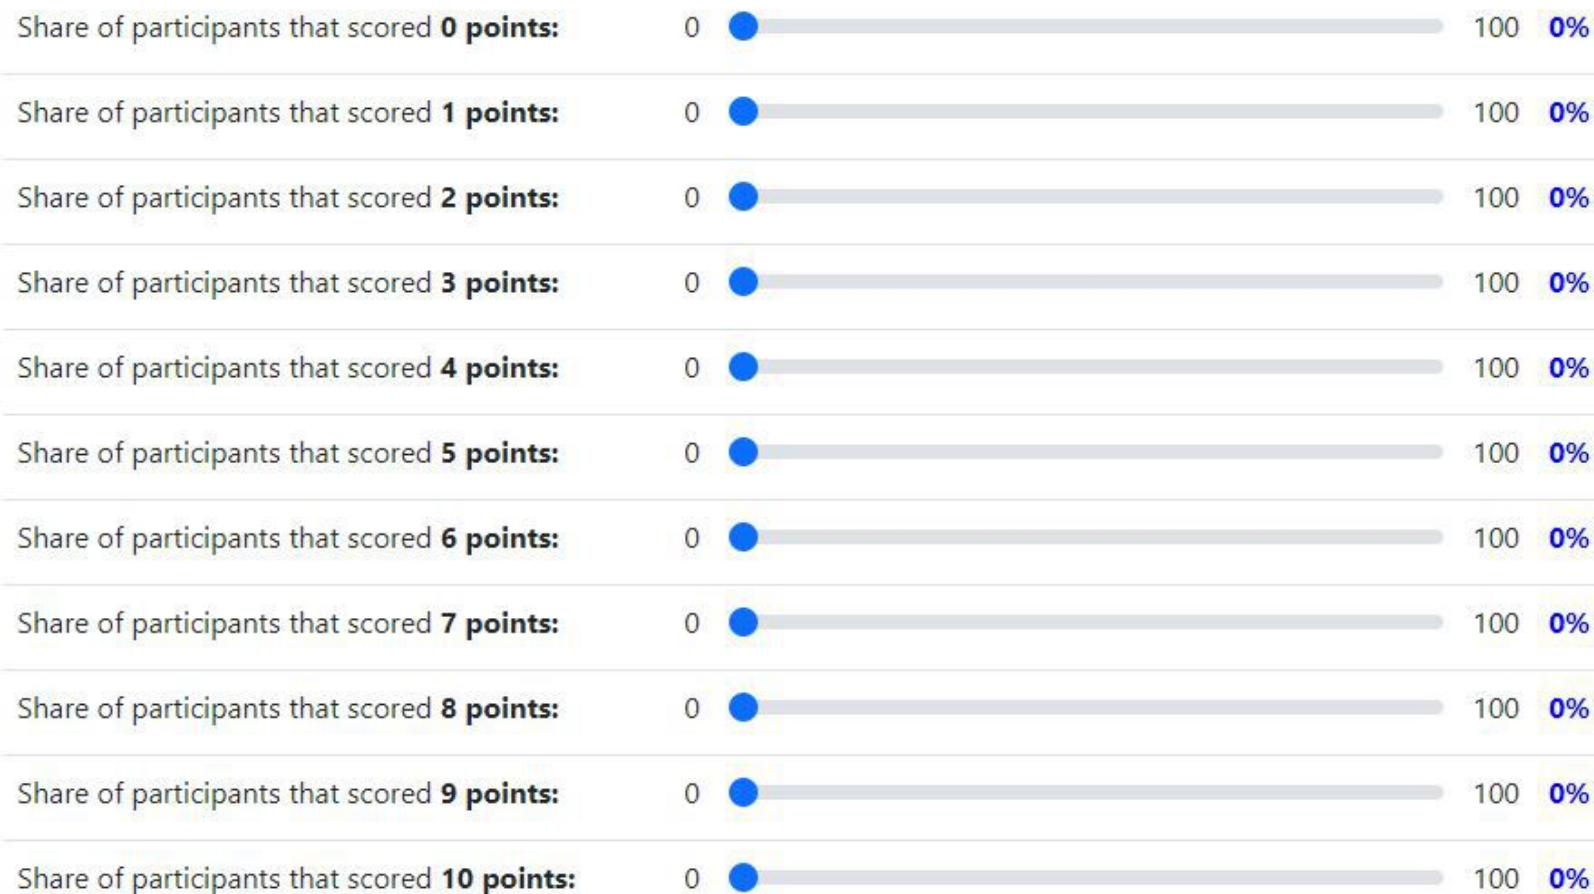

Before you click **next**, please make sure that the sum of all probabilities is 100%.

Next

How well do you think others did?

In the table below please indicate the **estimated share of participants** that scored 0, 1, 2, ..., 10 points, respectively. For each line, please adjust the slider to the share of participants who achieved that specific score. Overall, all shares must add up to 100 percent.

One of the rows will be picked at random and if **your estimated share is within 5 percentage points of the actual share** of participants who managed to score that number of points, you will get an **additional \$1.00**.

Sum of shares: **0** %

Before you click **next**, please make sure that the sum of all shares is 100%.

Next

One more decision

For completing the 10 predictions you are awarded an additional \$2.00. However, your partner will have the opportunity to **reduce** this additional amount down to anywhere between 0 and \$2.00, **i.e. your partner will be able to punish you..**

Instead of having your own predictions matter for the payoff of your partner you may also delegate the predictions to an algorithm. In this case, the payoff of your partner would **almost entirely depend on the predictions of the algorithm** instead of your own predictions.

Based on your 10 predictions:

You and the algorithm performed equally well in the 10 prediction tasks.

This will also be known to your partner at the time that he/she makes his/her decision on whether to reduce your additional payoff. Moreover, your partner can also make their punishment decision conditional on whether you delegated the predictions to an algorithm or not.

Options presented in random order

Delegation Decision:

- ☐ I do not want to delegate the 10 predictions. I know that my partner can reduce my additional payoff.
- ☐ I want to delegate the 10 predictions to the algorithm. I know that my partner can reduce my additional payoff.

Next

Your Partner's Decision

We will ask your partner whether they want to reduce your additional payment of \$2.00 that you received for completing the tasks. If they decide to reduce your additional payment they incur a cost of \$0.10. When making his/her decision your partner will have the same information about the weight prediction task that you had, but he/she will not have performed the task. Your partner will also know that you and the algorithm performed equally well and that you were also informed about that.

At the time of making her decision your partner will not know yet whether you delegated the predictions to an algorithm or not and whether you earned your partner \$1.00 or \$5.00. That is why your partner will be asked to make a decision for each of the cases below. The decision for the case that applies to you will be implemented afterwards and your payment will be reduced by the amount specified for that case by your partner.

How do you think your partner will choose to reduce your additional payment in these 4 cases? Please use the slider to indicate how much you think your partner chooses to reduce your payment by.

Perhaps instead of block-wise random order of the cases make order endogeneous to their delegation decision, i.e. first the two cases with delegation if they delegated and first the two cases without delegation if they did not delegate

Case 1

You **did not delegate** the predictions to an algorithm and scored 7 or more points, thereby **earning your partner \$5.00**.

0  \$2.00

I believe that my partner will **reduce my payoff by 0\$** in this case.

Case 2

You **did not delegate** the predictions to an algorithm and scored less than 7 points, thereby **earning your partner only \$1.00**.

0  \$2.00

I believe that my partner will **reduce my payoff by 0\$** in this case.

Case 3

You **delegated** the predictions to an algorithm and the algorithm scored 7 or more points, thereby **earning your partner \$5.00**.

0  \$2.00

I believe that my partner will **reduce my payoff by 0\$** in this case.

Case 4

You **delegated** the predictions to an algorithm and the algorithm scored less than 7 points, thereby **earning your partner only \$1.00**.

0  \$2.00

I believe that my partner will **reduce my payoff by 0\$** in this case.

Thank you!

Thank you for participating in this experiment.

You managed to score **0** points in the prediction task. Therefore you earned your partner \$1.00.

You will receive your participation fee directly and the additional payments after your partner made the punishment decisions.

Your total payoff is structured in the following way:

Participation Fee (\$2.00)
+ additional payoff for completing the prediction task (\$2.00)
- punishment by your partner (up to \$2.00)
+ additional payoff if you guess other's performance correctly (\$1.00)

After clicking the 'Next' button you will be redirected to Prolific.
