

Consent

Thank you for your interest in participating in this study. The experiment will take **approximately 5 minutes** to be completed. All information collected during this study will be kept confidential. All data will be stored **anonymously and securely** and used only for research purposes.

You will be compensated for your participation in the study. You can only be compensated if you complete the entire questionnaire. You will receive **at least a payment of \$1.00** as well as an **additional bonus payment that depends on your and another participant's decisions**.

If you have any questions or concerns about this study, please contact felix.boenisch@wzb.eu.

I have read and understand the above information. I voluntarily agree to participate in the study.

☐ Yes

Welcome

In this experiment we match you with **another randomly selected participant, your partner**. Your partner has already made his/her decisions. He/She had to make a sequence of 10 predictions. In particular, your partner had to **predict a person's weight** based just on a facial image like the one below.

The performance of your partner's predictions are **determining your payoff in the experiment**. If a prediction is **within 10 pounds (lbs)** of the true answer, your partner scores a point. If they managed to score **7 or more points** across all 10 predictions you will be paid **\$5.00**. If they scored **less than 7 points** across all 10 predictions you will only be paid **\$1.00**. Your partner **did not** receive an additional payment for performing better at the task.

Your decision

Reminder: The performance of your partner's predictions are **determining your payoff in the experiment**. If a prediction is **within 10 pounds (lbs)** of the true answer, your partner scores a point. If they managed to score **7 or more points** across all 10 predictions you will be paid **\$5.00**. If they scored **less than 7 points** across all 10 predictions you will only be paid **\$1.00**. Your partner **did not** receive an additional payment for performing better at the task.

Instead of his/her own predictions to determine your payoff, your partner also had the **opportunity to delegate** the predictions to an algorithm. If he/she chose to do so, your payoff would be determined by the predictions of the algorithm. Your partner and the algorithm performed **equally well** in the 10 prediction tasks that are relevant for your payoff and your partner was aware of that when making his/her decision to delegate.

Now, you will have the chance to reduce the payment of your partner, i.e. punish him/her. We will ask you to make a decision for four different cases. For each case you can either keep an extra \$0.10 by not reducing your partner's payoff or you can forgo the extra \$0.10 and reduce your partner's payoff by any amount up to \$2.00. The case that corresponds to the decisions of your partner will be implemented and his/her payoff will be reduced by the amount you specify.

For each case please use the slider to indicate your desired reduction of your partner's payoff.

Case 1

Your partner **delegated** the predictions to an algorithm and the algorithm scored 7 or more points, thereby **earning you \$5.00**.

0  \$2.00

I will **reduce my partner's payoff by 0\$** in this case.

Case 2

Your partner **delegated** the predictions to an algorithm and the algorithm scored less than 7 points, thereby **earning you only \$1.00**.

0  \$2.00

I will **reduce my partner's payoff by 0\$** in this case.

Case 3

Your partner **did not delegate** the predictions to an algorithm and scored 7 or more points, thereby **earning you \$5.00**.

0  \$2.00

I will **reduce my partner's payoff by 0\$** in this case.

Case 4

Your partner **did not delegate** the predictions to an algorithm and scored less than 7 points, thereby **earning you only \$1.00**.

0  \$2.00

I will **reduce my partner's payoff by 0\$** in this case.

One more decision

We want to get a sense of how difficult you think the prediction task is.

In the table below please indicate the **estimated share of participants** that scored 0, 1, 2, ..., 10 points, respectively. Remember, a point was scored if the prediction was not more than 10 pounds (lbs) off of the true bodyweight. For each line, please adjust the slider to the **share of participants who achieved that specific score**. Overall, all shares must add up to 100 percent.

One of the rows will be picked at random and if **your estimated share is within 5 percentage points of the actual share** of participants who managed to score that number of points, you will get an **additional \$1.00**.

Share of participants that scored 0 points:	0	<input type="range"/>	100	0%
Share of participants that scored 1 points:	0	<input type="range"/>	100	0%
Share of participants that scored 2 points:	0	<input type="range"/>	100	0%
Share of participants that scored 3 points:	0	<input type="range"/>	100	0%
Share of participants that scored 4 points:	0	<input type="range"/>	100	0%
Share of participants that scored 5 points:	0	<input type="range"/>	100	0%
Share of participants that scored 6 points:	0	<input type="range"/>	100	0%
Share of participants that scored 7 points:	0	<input type="range"/>	100	0%
Share of participants that scored 8 points:	0	<input type="range"/>	100	0%
Share of participants that scored 9 points:	0	<input type="range"/>	100	0%
Share of participants that scored 10 points:	0	<input type="range"/>	100	0%

Sum of shares: **0** %

Before you click **next**, please make sure that the sum of all shares is 100%.

Thank you!

Thank you for participating in this experiment.

Your partner scored 8 points in the prediction task and did not delegate to the algorithm. Therefore, your partner's decisions earned you a payoff of \$5.00.

In this case you decided not to reduce your partner's payoffs and retain the \$0.10.

You will receive your payoff shortly.

After clicking the 'Next' button you will be redirected to Prolific.
